Updated: 04/13/22

Planning for the Future

USD 262 Valley Center Public Schools

Enrollment Analysis

April 2022

RSP & Associates

RSP Quick Facts:

- Founded in 2003
- Professional educational planning firm
- Expertise in multiple disciplines
- Over 20 years of planning experience
- Over 80 years of education experience
- Over 20 years of GIS experience
- Projection accuracy of 97% or greater

RSP Recent Projects:

Clarksville Montgomery County School System, Tennessee

- Enrollment Analysis
- Boundary Analysis

Hutchinson Public Schools

- Enrollment Analysis
- Facility Master Plan

Kansas City Kansas Public Schools

- Enrollment Analysis
- Boundary Analysis

RSP Leadership:

Robert Schwarz, AICP, CEFP

- Military, County, City, and School District Planner
- Kansas University - Master of Urban Planning (MUP)
- American Institute of Certified Planners (AICP)
- Certified Educational Facility Planner (CEFP)

Company was started with the desire and commitment to assist school districts in long-range planning. RSP has served over **130** clients in:

- Arkansas
- Colorado
- Iowa
- Illinois
- Kansas
- Minnesota
- Missouri
- Nebraska
- North Dakota
- Oklahoma
- South Dakota
- Tennessee
- Wisconsin

Expectations

Thank to USD 262 Valley Center Public Schools, Sedgwick County, City of Valley Center, Census Bureau, and ESRI.

Things to Consider…

- Timeline – Project timeline is a result of ensuring student data could represent as close as possible to the Official County Data with attributes that would allow RSP to forecast enrollment at a parcel level geography.
- Findings – The finding were not focused on supporting or contradicting any past internal or outsourced studies. This analysis is based on data, data, and more data.
- Study – This study factored in many different data sets to provide data driven analysis that is the foundation to the RSP Statistical Forecast Model (SFM).
- Change – Enrollment change in the community is influenced by, but not limited to, the birth rate, demographics, types of development and/or housing affordability.
- Facts…
    1) The study does not provide specific information about which site would be best suited for a new facility or for that matter should the district build any new facility – this analysis is one portion of how to make that decision
    2) This analysis is based on the same grade configuration and educational programming expectations the patrons have for each student
    3) Projecting enrollment is not a science – like life in general some assumptions happen that may lead to greater enrollment while others toward a smaller enrollment

The goal of this study is to help the board, administration, and public understand how to make the best decision for the students at the classroom level.

Discussion Points

Part 1 Enrollment & Demographics

- Things to Consider
- Maps & Data
- Sophisticated Forecast Model
- Demographics
- Past Enrollment & Change

Part 2 Development

- Population, Development, & Enrollment Trends
- Yield Rate
- Maps & Data

Part 3 Projections

- Past, Current, & Future Enrollment
- Building Projections

Part 4 Next Steps

- Moving Forward
- Next Steps & Key Consideration

© 2022 RSP. All rights reserved

Part One: Past Enrollment and Demographics

© 2022 RSP. All rights reserved

100,000 Foot Perspective

Updated: 04/13/22

District-wide enrollment forecasted to increase by about 100 students and enroll 3,145 students in five years (2022/23 to 2026/27)

- **Elementary School enrollment forecasted to increase by about 80 students**
- **Intermediate School enrollment forecasted to decrease by about 30 students**
- **Middle School enrollment forecasted to increase by about 10 students**
- **High School enrollment forecasted to increase by about 40 students**

Enrollment for the Early Learning Center and Virtual Academy are not included in this analysis:

- Valley Center Learning Center enrolls between 35 and 65 students each year

Capacity of district buildings was provided and analyzed in this study. All building are within 75% to 100% of building capacity – no buildings are expected to face capacity challenges in this projection time period (2022/23 to 2026/27):

- **In 2026/27, District-wide enrollment is forecasted to occupy 96.3% of district building capacity**
- **In 2026/27, Elementary School enrollment is forecasted to occupy 99.2% of building capacity**
- **In 2026/27, Intermediate School enrollment is forecasted to occupy 87.0% of building capacity**
- **In 2026/27, Middle School enrollment is forecasted to occupy 94.4% of building capacity**
- **In 2026/27, High School enrollment is forecasted to occupy 99.8% of building capacity**

Areas of potential development were identified throughout the district:

- 64 single-family units were built in 2021
- Most of the potential growth is single-family residential type – over 1,600 units were identified for potential growth in ten years
- Availability of infrastructure to the northwest and southwest will continue to play a role in timing of future development
- Current impacts to the economy and housing market must be continually monitored

Planning Areas – Detailed

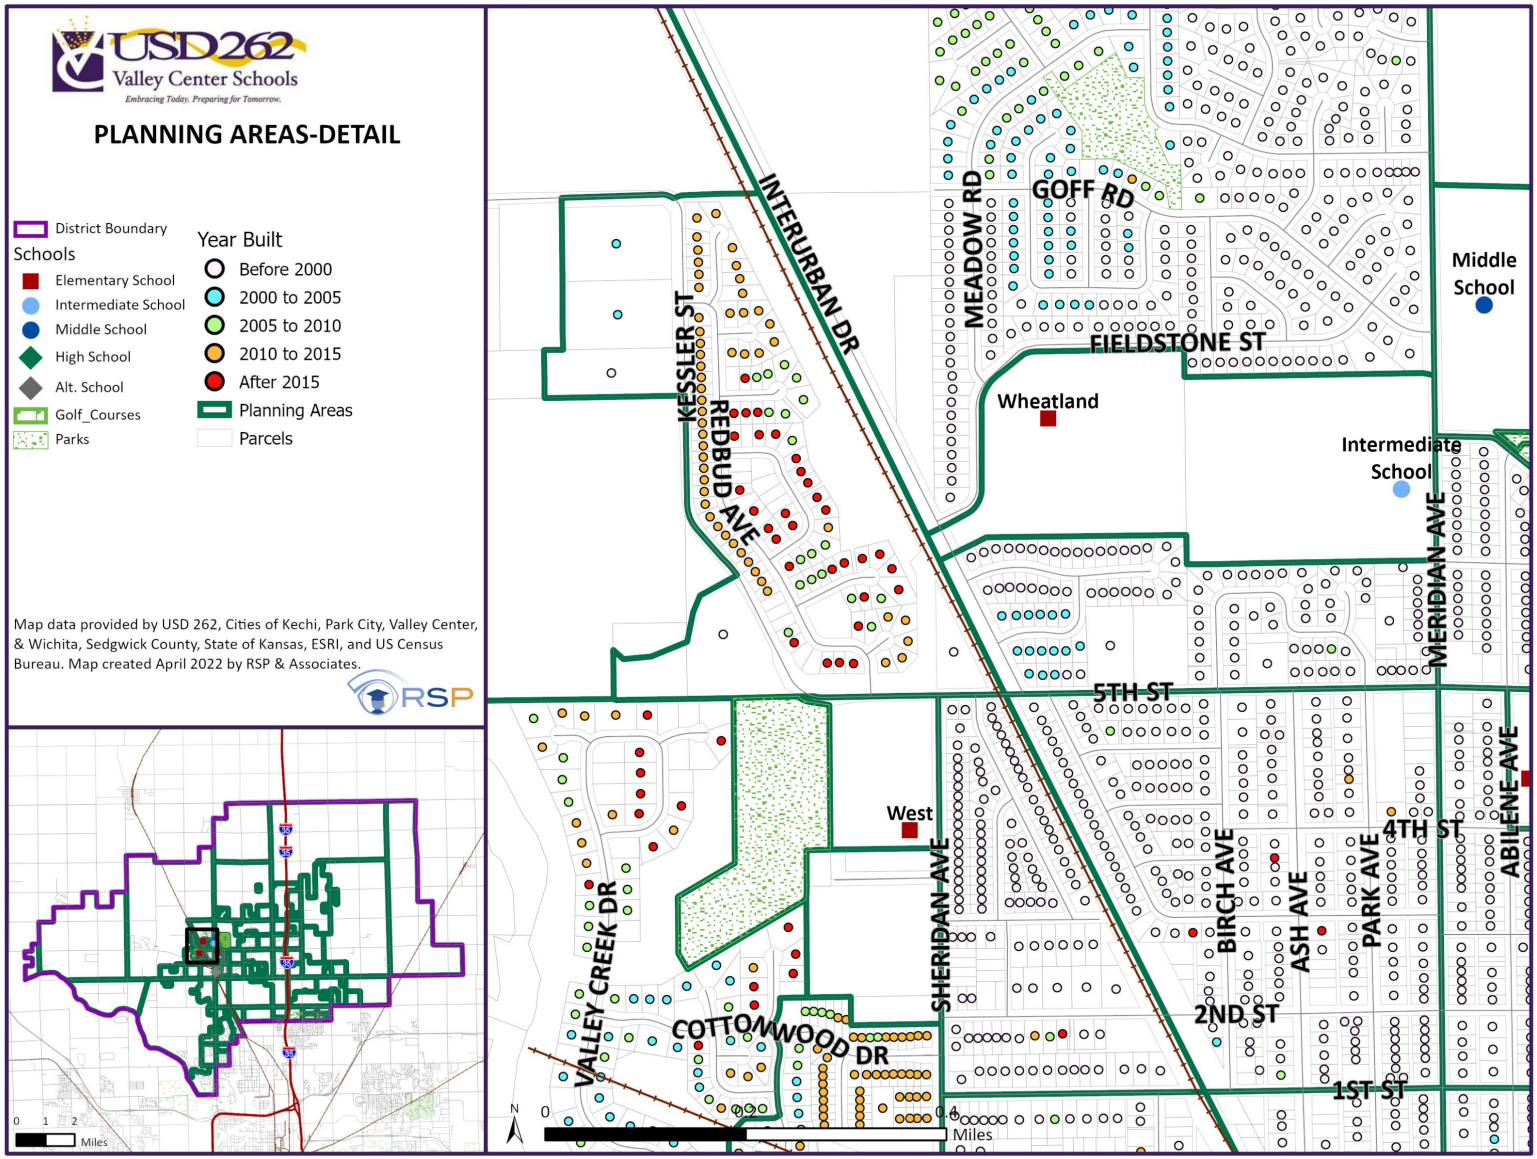
Planning Areas:

- **Green Line**

Statistically analyzing data with this number of geographic based polygons will provide a deeper context to how change is happening resulting in a reliable tool to make credible planning decisions

Each planning area had a different outlook based on indicators such as value of housing, square footage of housing unit, when the housing product was constructed, as well as access to amenities such as shopping, parks, trails, and roads

Planning Areas are created from: Land Use, Residential Density, Natural Features, Manmade Features, Attendance Areas



© 2022 RSP. All rights reserved

Sophisticated Forecast Model

Built-Out $S_{c,t,x} = S_{c-1,t-1,x} * GC$

Let:

S = The number of students, either an actual count or a projected count

x = A subscript denoting an attendance ares in the School District

c = Grade level

t = Time (years)

GC = Growth component either modeling enrollment increase or decrease based on historical information, expressed as a real number

Developing $S_{c,t,x} = S_{c-1,t-1,x} + (BP_{t,x} * R_{c,x})$

Where: $BP_{t,x} = \left(\frac{(CP_x)(BT_x)(A_x)}{\sum x (CP_x)(BT_x)(A_x)} \right) * CT$

Let:

S = The number of students, either an actual count or a projected count

x = A subscript denoting an attendance area in School District

c = Grade level

t = Time (years)

BP = Building permit forecast as given by the Building Permit Allocation Model (BPAM) model

Rc, x = Student Enrollment ratio of cohort c in planning area x

CP = Capacity of a planning area as expressed by available housing units

BT = Building history trend of planning area

A = An index which models the likelihood of development

CT = Building permit control total forecast

This is the **central focus** of everything RSP does.

The model is based on what is happening in a school district. The best data is statistically analyzed to provide an accurate enrollment forecast. The District will be able to use RSP's report and maps to better understand demographic trends, school utilization, and the timing of construction projects.

The SFM is…

- a social science… not an exact science; it identifies behavior trends to determine the propensity of them to be recreated
- valuable in how our team created and analyzes the geography at a planning area level for any commonality which while help produce an accurate forecast

Some variables examined for each planning area (but not limited to) are…

- natural cohort (district data)
- planning area subdivision lifecycle (a RSP variable)
- the value of homes (county assessor data)
- type of residential units like single-family, multi-family, townhome, mobile home, etc. (county assessor data)
- year units were built
- estimated female population (census data)
- estimated 0-4 population (census data)
- existing land use (county and city data)
- future land use (county and city data)
- capital improvement plan (county and city data)
- future development (county and city data)
- in-migration of students (district data) & out-migration of students (district data)

3-Year Weighted Average	6,625.3	-137.83				

Source: Kansas Department of Health and Valley Center Public Schools

Low Range
High Range

Live Birth Observations

- Tracks the number of live births in Sedgwick County and the corresponding number of kindergarten students in Valley Center Public Schools five years later
- The number of live births have been decreasing. This is consistent with national and state trends
- 3-year average of 130 less live births per year
- USD 262 consistently enroll around 2.5% of the live births in Sedgwick county each year (range 2.2% to 2.8%)
- Kindergarten enrollment has varied between 208-160 students per year
- The kindergarten classes moving forward are forecasted to be between 152 - 143 students on the low end and 191 - 180 students on the high end

Main Takeaway: The decline of live births in the county can potentially result in smaller kindergarten classes.

Source: Valley Center Public Schools USD 262 (Student Data 2012/13 to to 2021/22)

Observations:

- Largest K-12 class in 2021/22 – 9th grade with 320 students
- Smallest K-12 class in 2021/22 – 1st grade with 178 students
- Graduating senior class is larger than the incoming Kindergarten class which signals for decreasing district enrollment
- Largest historical increase was from 2018/19 to 2019/20 with increase of 4.1%
- Largest total enrollment since 2005/06 is **2019/20**
- 2021/22 has the largest grades since 2003/04 in:
  PK, 3rd grade, and 4th grade

DISCLAIMER: All past student data is exported from the district student database allowing the ability to do robust statistical analysis by student geography. The student database export will not always align perfectly with the Official Count (Statistical 99% or greater match by grade)

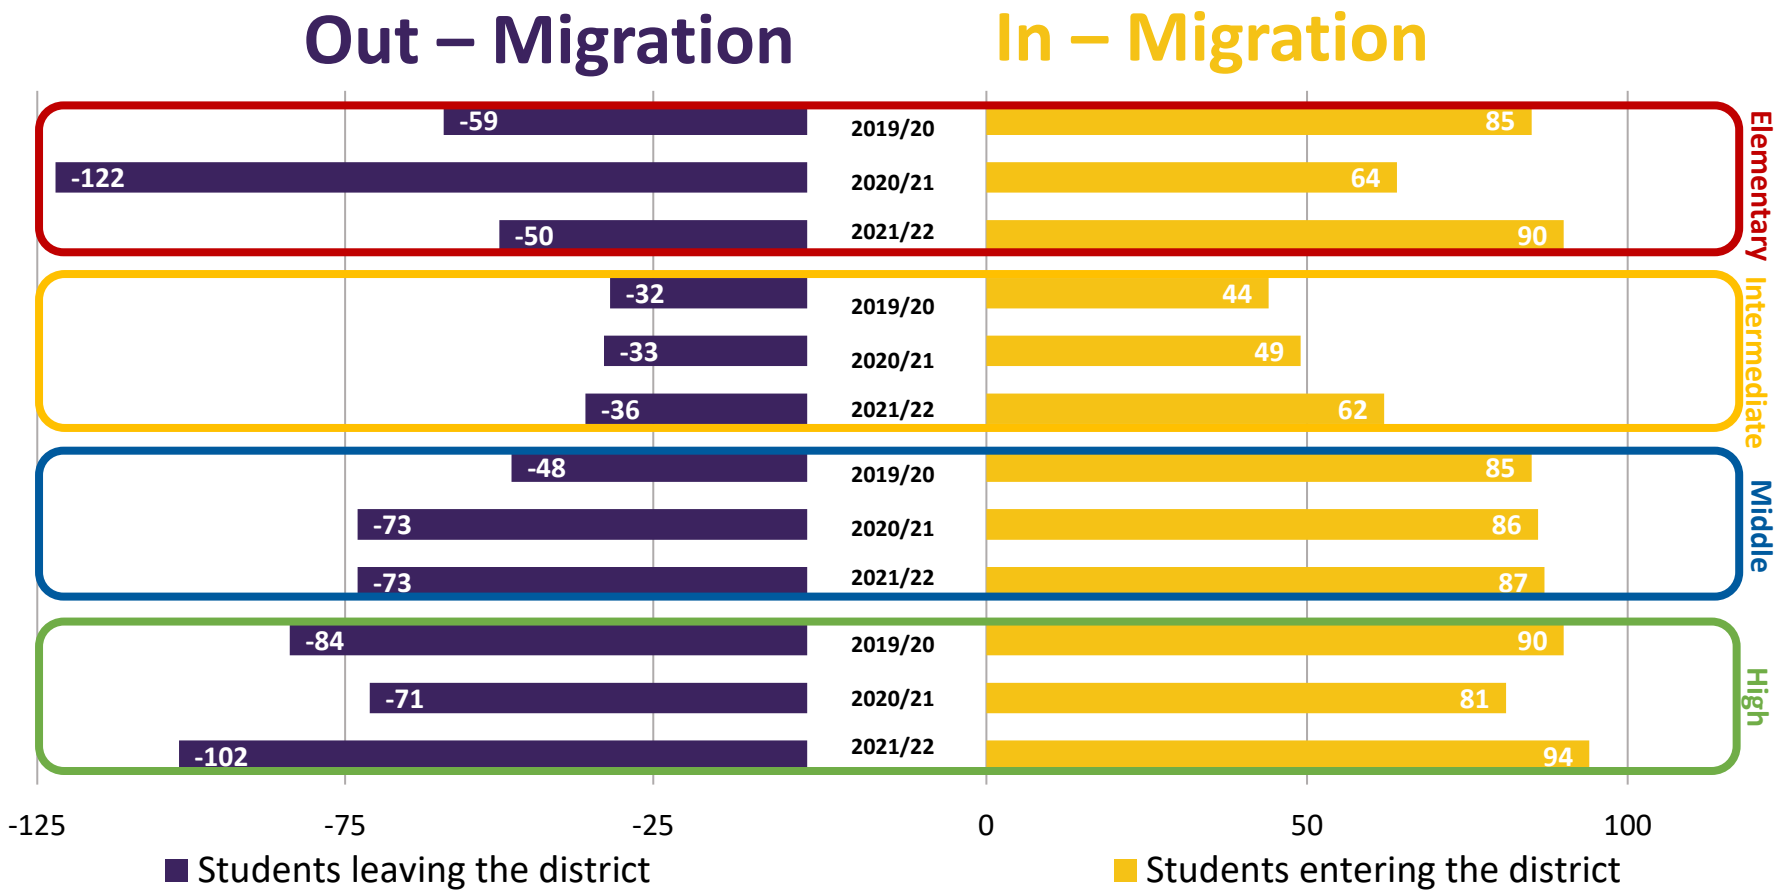
Source: Valley Center Public Schools USD 262 (Student Data 2012/13 to to 2021/22)

Observations:

- Largest 3-year average K-12 class cohort increase – 8th to 9th grade **(+47)**
- Largest 3-year average K-12 class cohort decrease – 9th to 10th grade **(-51)**
- Overall percent change from previous year of 2.0% - increase of 61 students
- Instructional Modality will have to be monitored to determine if the students who are not attending the district still reside in the district and if or how many return to receive services in the future years
- **Cohort recovery from previous year in all grades (historically see a 9th to 11th cohort loss)**

© 2022 RSP. All rights reserved



Definition

Out-Migration: Shows number of students in grade K to 11th that were attending the District in 2020/21, but are not attending the District in 2021/22.

In-Migration: Shows number of students in grade 1st to 12th that are attending the District in 2021/22, but were not attending the District in 2020/21.

Observations

- 2019/20 lost 223 students and gained 304 students; **NET: +81**
- 2020/21 lost 299 students and gained 280 students; **NET: -19**
- 2021/22 lost 261 students and gained 333 students; **NET: +72**

Main Takeaway:

The district had a negative transfer of students in 2020/21 school year. The district saw a positive net migration in 2021/22 – similar to what was seen in 2019/20.

© 2022 RSP. All rights reserved

Student Count Change Map

Definition: Depicts student movement at each Planning Area from **2017/18** to **2021/22**

Orange: increase in students

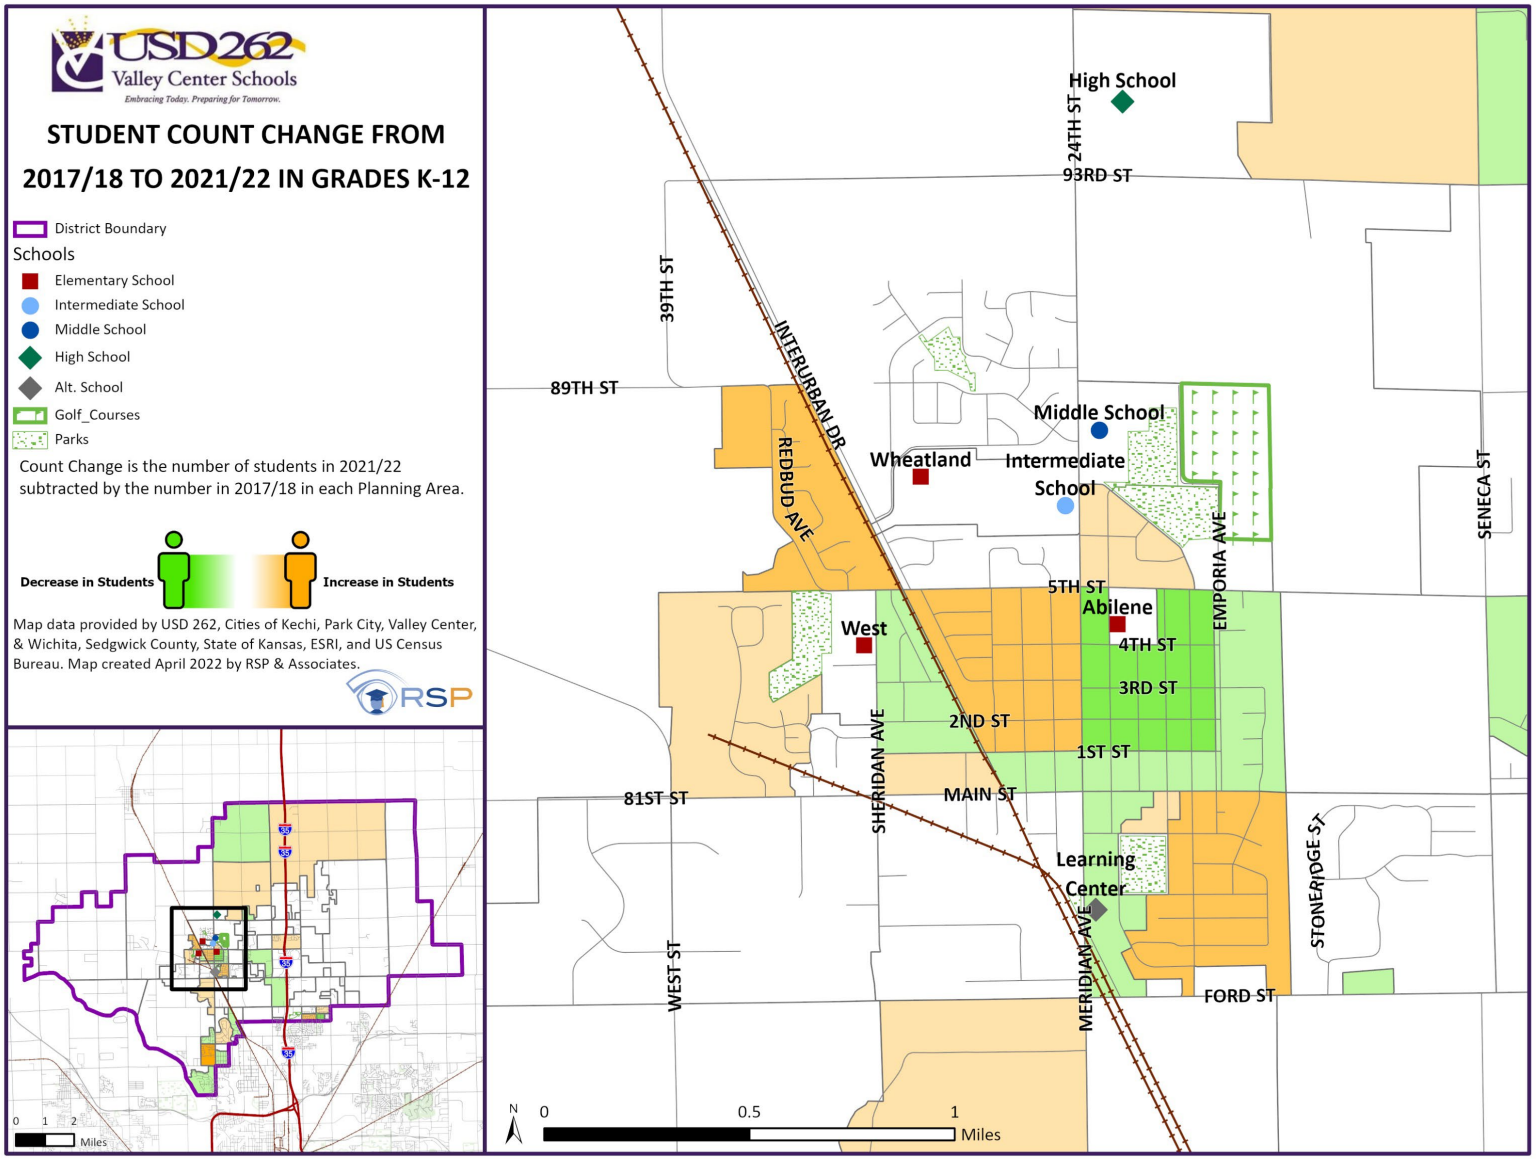
Green: decrease in students

White: no net change of students

New developments have a greater propensity to have more students in future years

Current colors do not indicate area will continue to increase or decrease

Each of these planning areas are fluid with respect to change – the visual shown is a snapshot: Areas shown as increasing will not always increase just like areas shown as decreasing will not always decrease



© 2022 RSP. All rights reserved

Heat Map

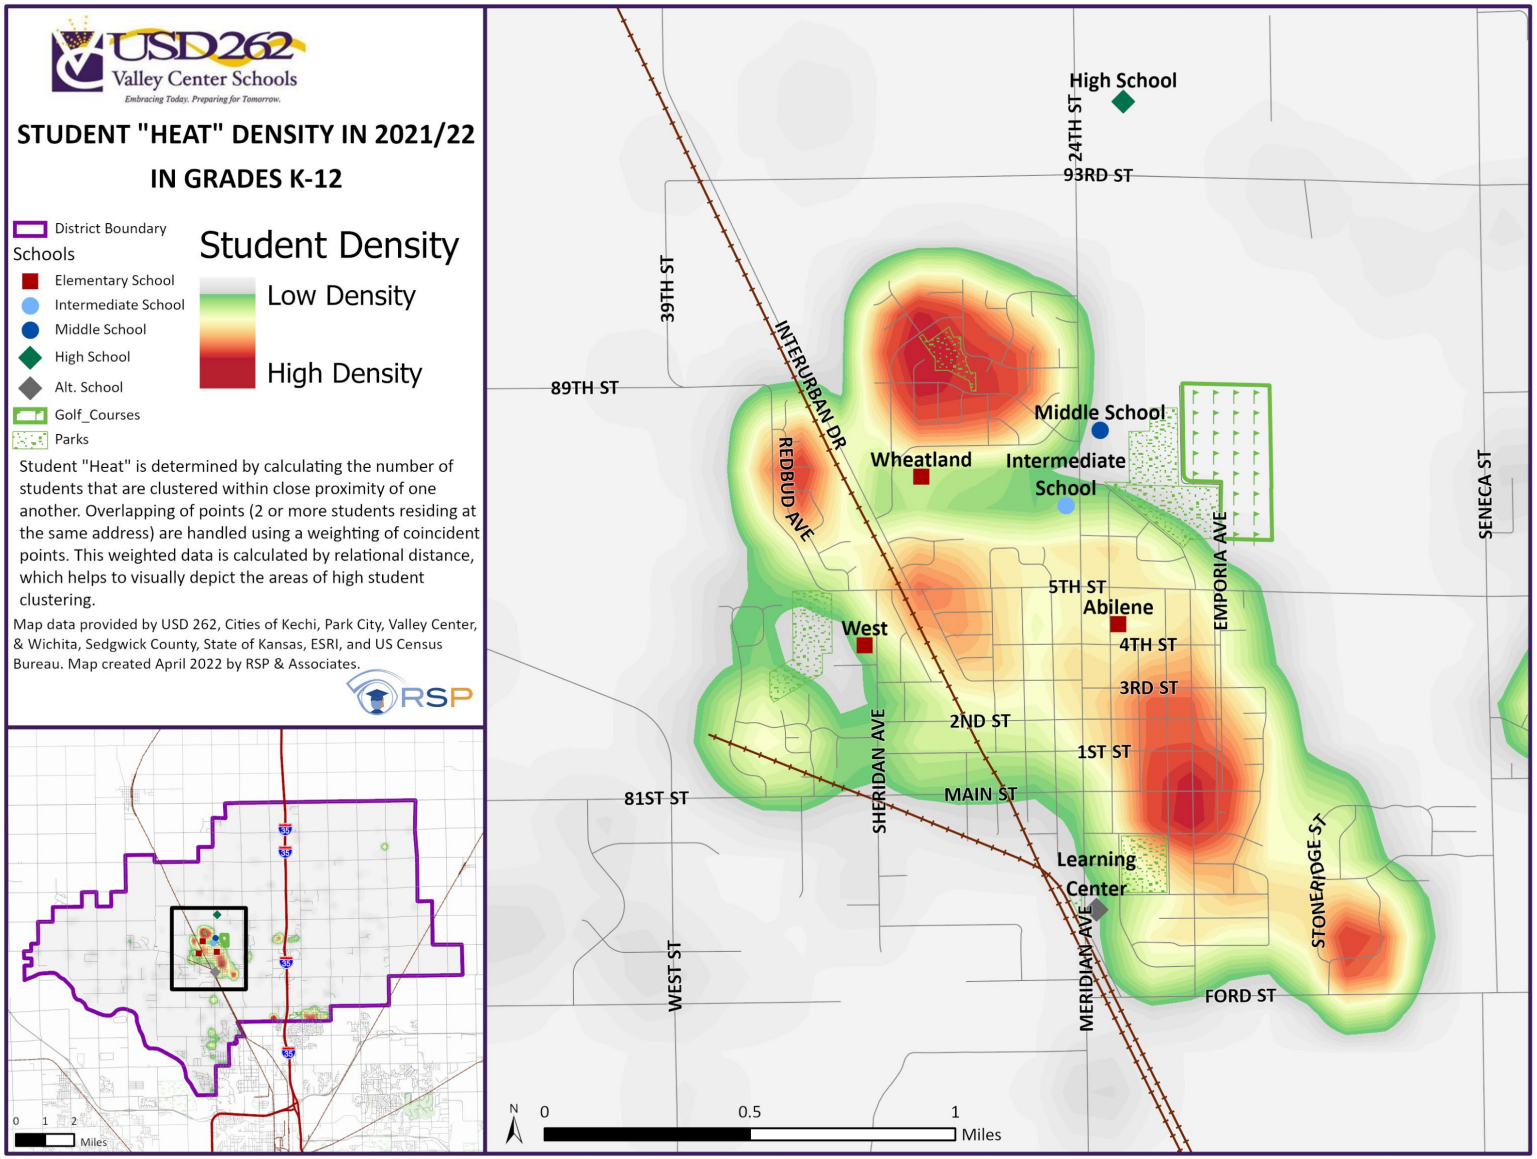
Definition: shows the location of students in proximity to other students for a “heat affect” in the district.

Red: highest density of students

Gray: lowest student density

Overlapping points (2 or more students) are handled using a weighting of coincident points

Newer developments and/or most affordable areas tend to have the greatest density



© 2022 RSP. All rights reserved

Enrollment Observations and Conclusions

Student Population:

- Live birth data for Sedgwick County has been trending downwards
- 2020 saw 220 less live births than 2019
- Kindergarten class size has been getting smaller as live births decrease – 184 kindergarteners this year (24 students less than 2012/13)
- Transfer students had a district wide gain of 72 students this year
- There was a negative migration of students the last year

Historic Enrollment Observations:

- Enrollment had been increasing
- It dropped in 2020/21 – likely due to the pandemic
- 2021/22 recovered the student loss to enroll similar student total as 2019/20

Current School Year Observations:

- Largest K-12 class in 2021/22 – 9th grade with 320 students
- Smallest K-12 class in 2021/22 – 1st grade with 178 students
- Most grades experienced a degree of cohort increase from last year to this year

Part Two: Development and Growth Trends

© 2022 RSP. All rights reserved

Population, Development, & Enrollment

	2012 to 2013	2013 to 2014	2014 to 2015	2015 to 2016	2016 to 2017	2017 to 2018	2018 to 2019	2019 to 2020	2020 to 2021
Building Trend	37	88	116	49	71	66	71	151	64
Population Change	107	107	108	109	110	111	111	112	110
Enrollment Change	43	60	44	24	76	77	123	-67	61

Source: Census Bureau, Sedgwick County, Valley Center Public Schools USD 262 , and RSP SFM & Demographic Models

Benchmark data to determine if there is a correlation between:

- Population change
- Building activity
- School enrollment

Graphic Explanation

- Census data indicates a stable population
- Building Activity has fluctuated year to year – large uptick in activity from 2019 to 2020
  - Annually monitoring local development is recommended
- K-12 Student Enrollment was increasing – large decrease from 2019 to 2020
- An increased from 2020 to 2021 was observed – likely a pandemic recovery

Source: USD 262 and RSP

- Tables shows the number of students per 100 single-family (SF) units by year and city they reside in
- District sees on average 51 K-12 students per 100 single-family households
- Rural areas have the largest 2021 SF yield rate with 85 students per 100 single-family households
- Wichita has smallest 2021 SF yield rate with 24 students per 100 single-family households
- Adding new housing inventory can increase the yield rate
- **There were 707 single-family homes built from 2012 to 2021**

Multi-Family Yield Rate

City	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	Avg

Source: USD 262 and RSP

- Tables shows the number of students per 100 multi-family (MF) units by year and city they reside in
- District sees on average 40 K-12 students per 100 multi-family households
- Rural has the largest 2021 MF yield rate with 45 students per 100 multi-family households
- Areas in Kechi and Wichita that are also in the district boundary do not include any multi-family units that yield students in this timeframe
- Adding new housing inventory can increase the yield rate
- **There were 48 multi-family homes built from 2012 to 2021**

© 2022 RSP. All rights reserved

Average Year Built Map

Year built data provided by Sedgwick County

Averages based on RSP Planning Areas and the units built in them

Based on a planning area and could be influenced by the number of units prior to new units being built

Colors to show decade units were built

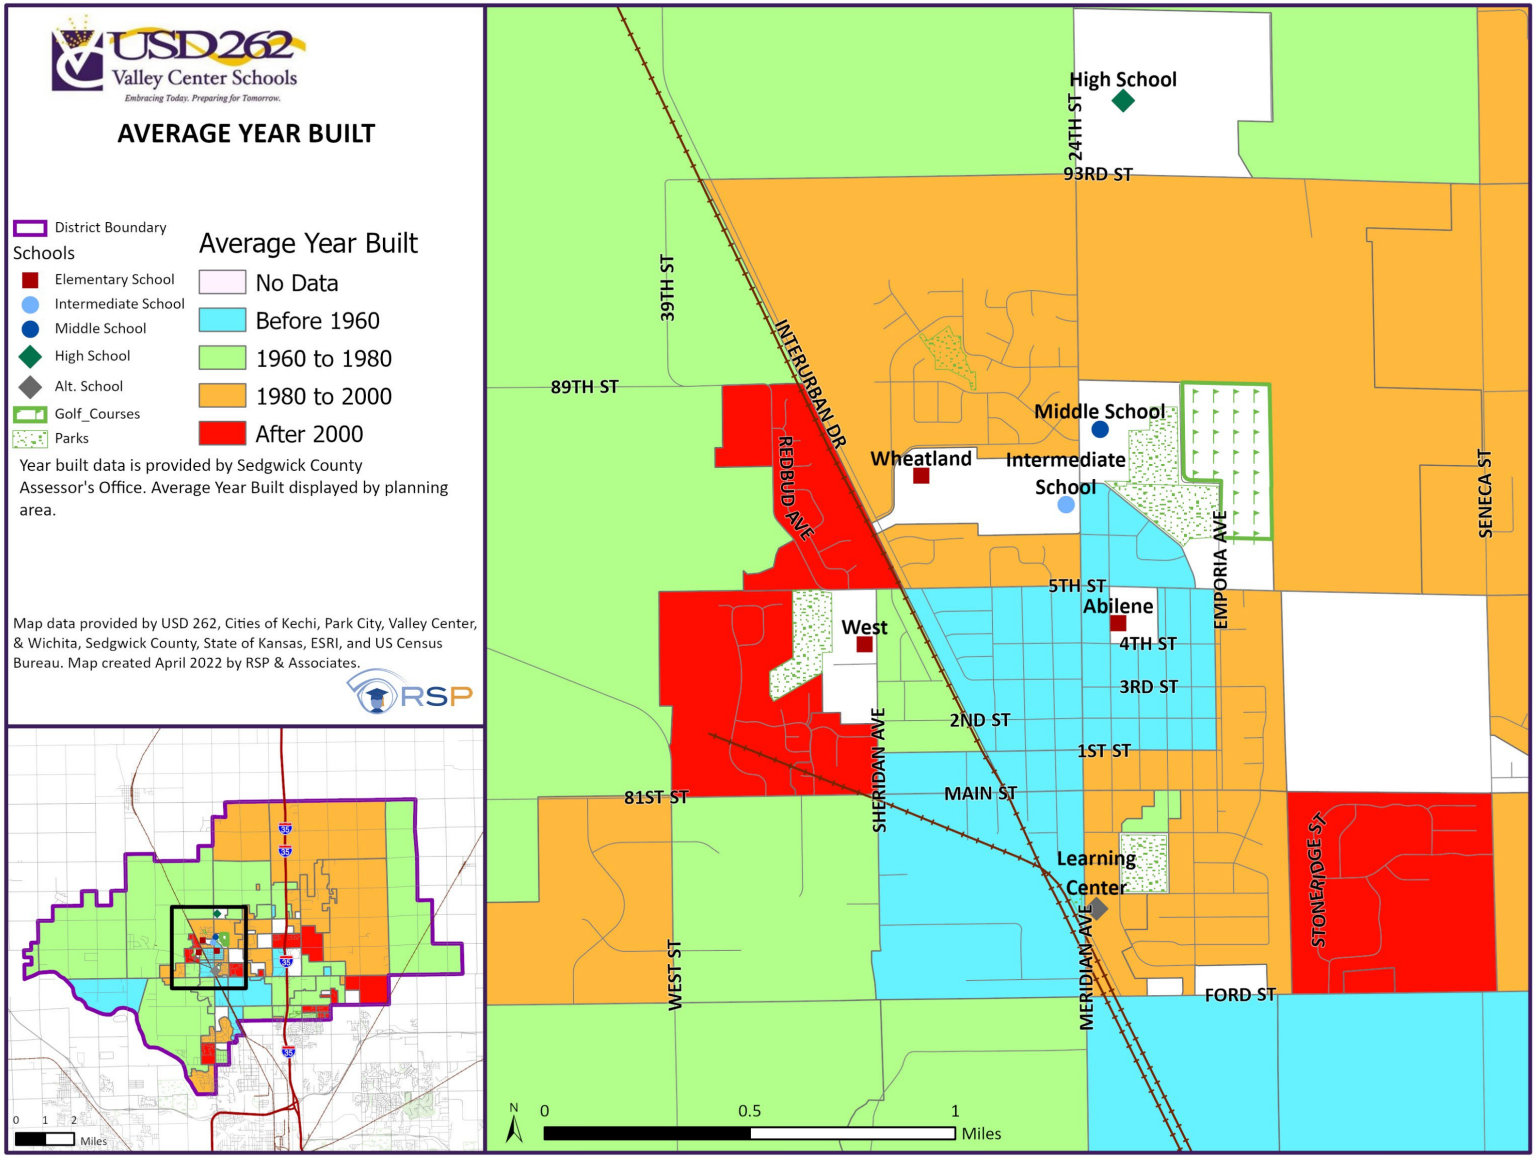
White – no data

Blue – Before 1960

Green – 1960 to 1990

Orange – 1990 to 2000

Red – After 2000



© 2022 RSP. All rights reserved

Median Home Value Map

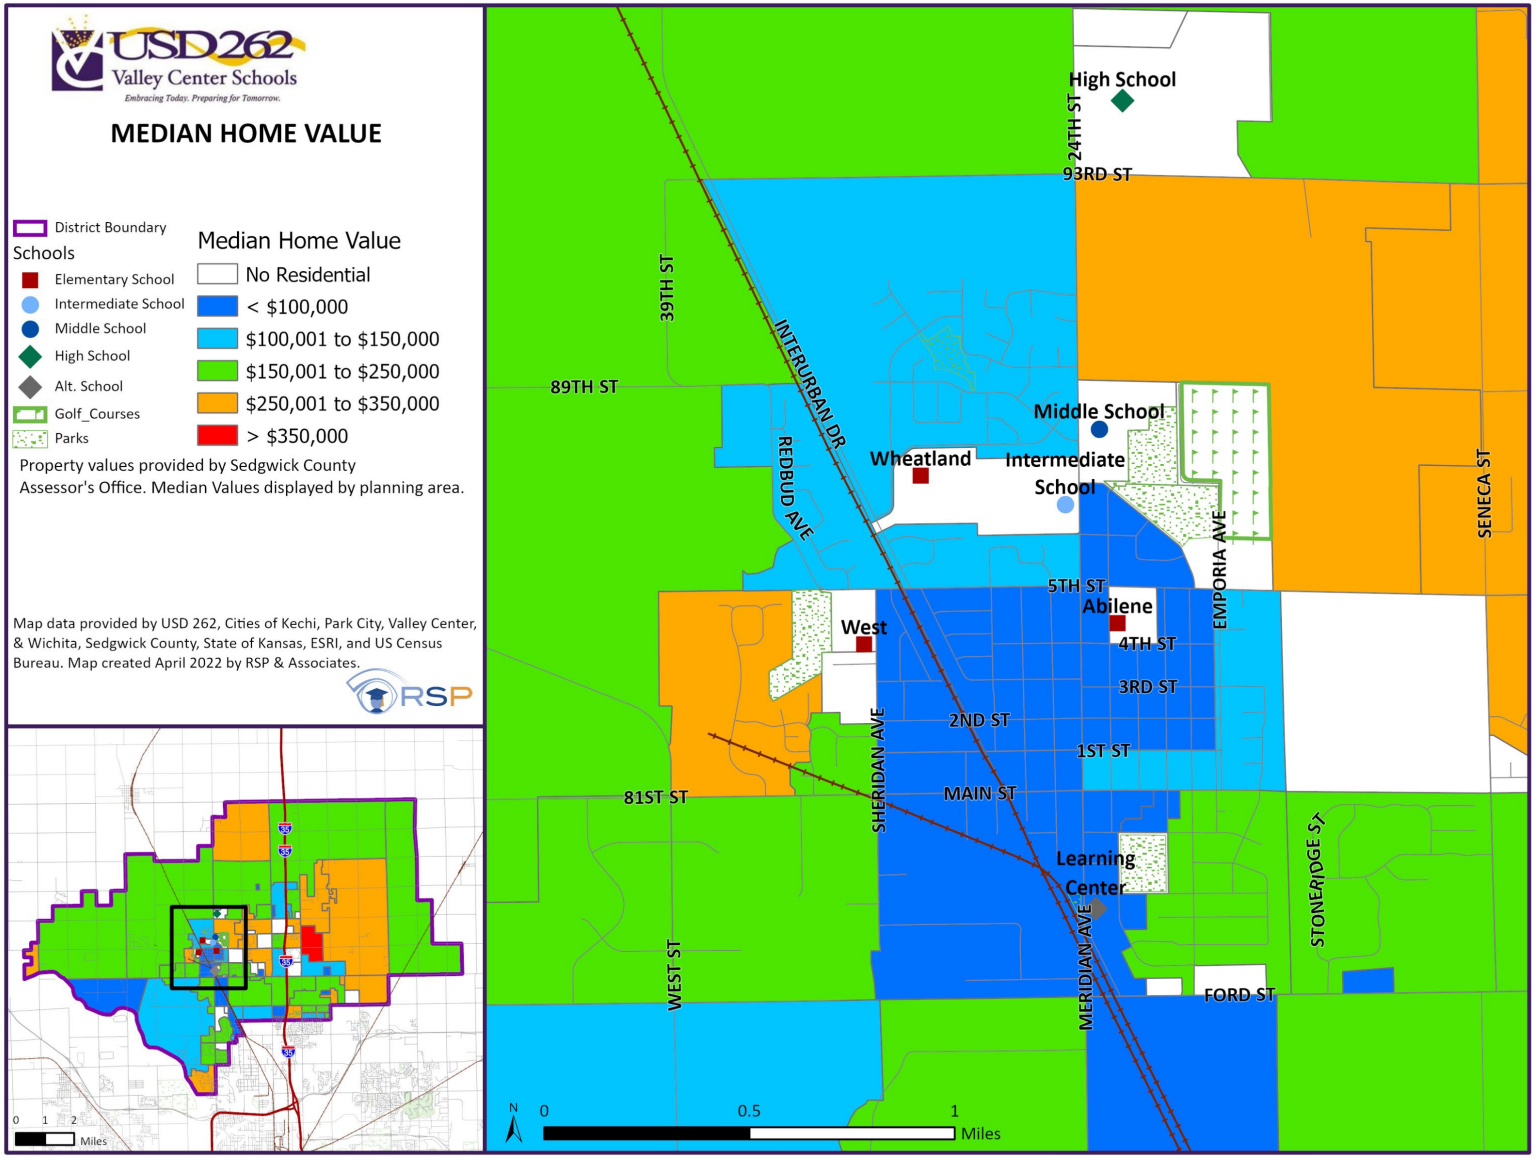
Based on assessed data by Sedgwick County assessor's office

Depicted by Median Value in each Planning Area –

Home values likely correlated to socio-economic status – new areas tend to be the least affordable

Areas shaded in **Orange** and **Red** have the greatest Median Home Value

Areas shaded in **Blue** represent the greatest affordability



© 2022 RSP. All rights reserved

Residential Year Built Map

Reveals the clusters of where residential development has occurred

Colors of dots represent a specific year according to the county assessor's office

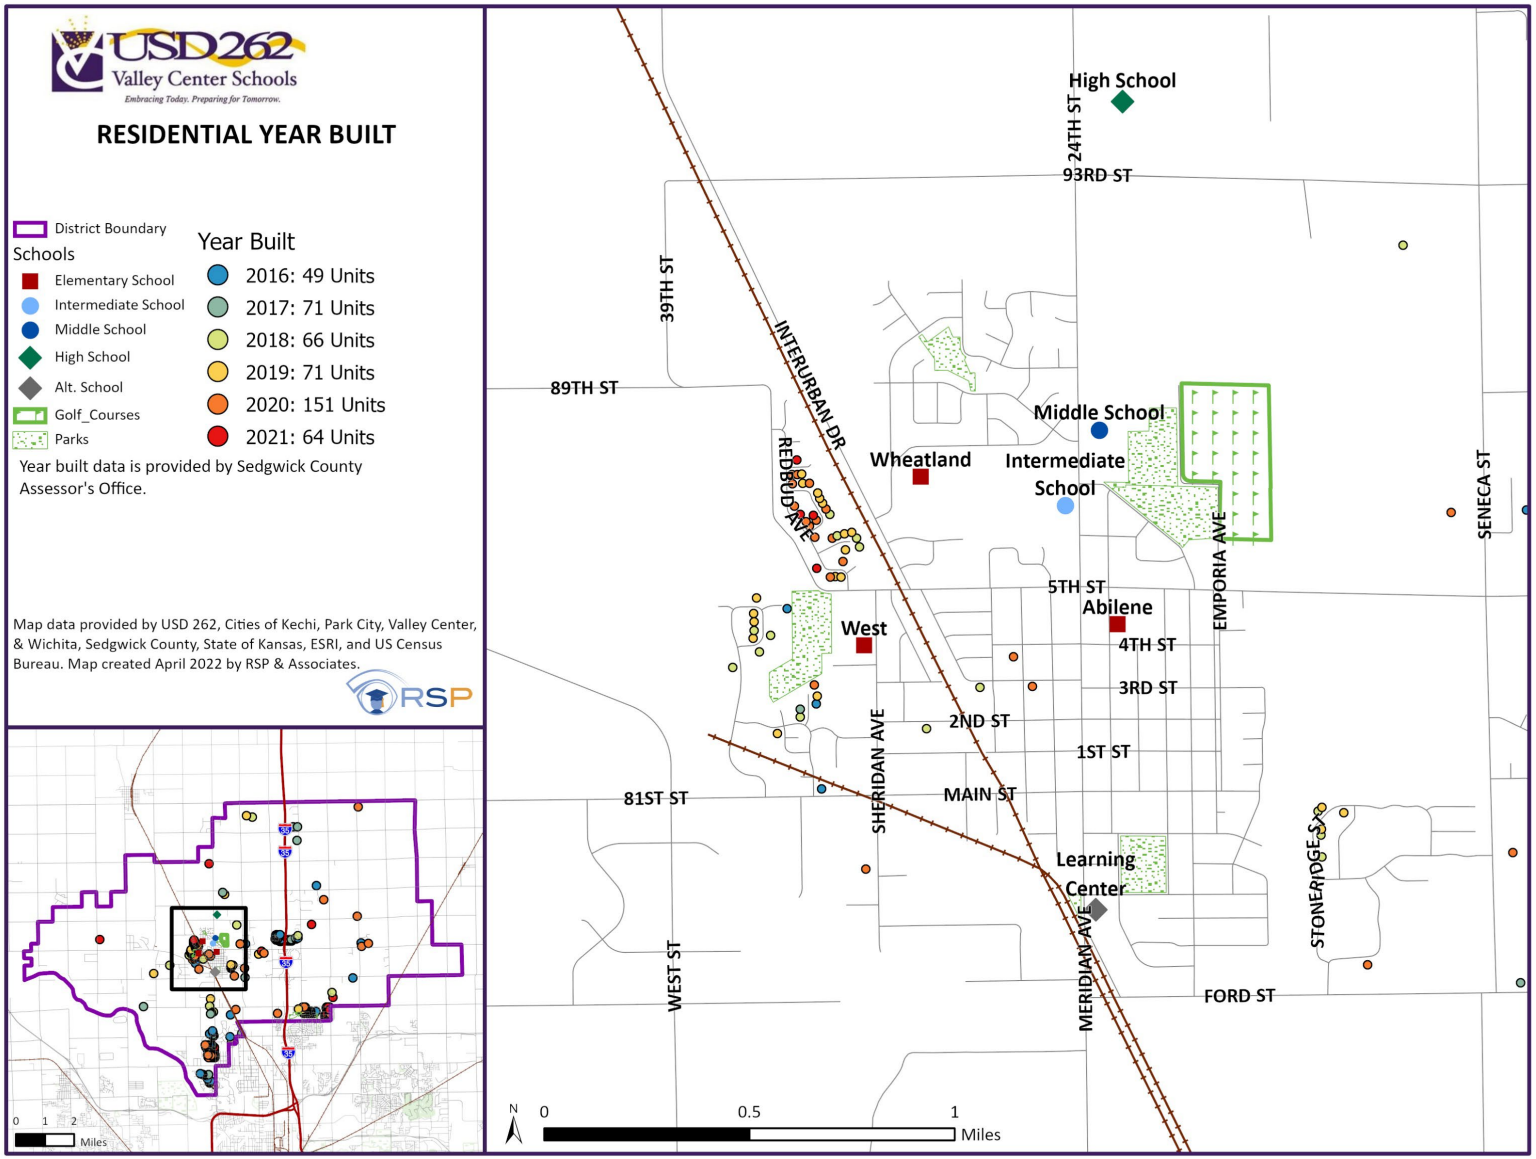
2019: 71 units

2020: 151 units

2021: 64 units

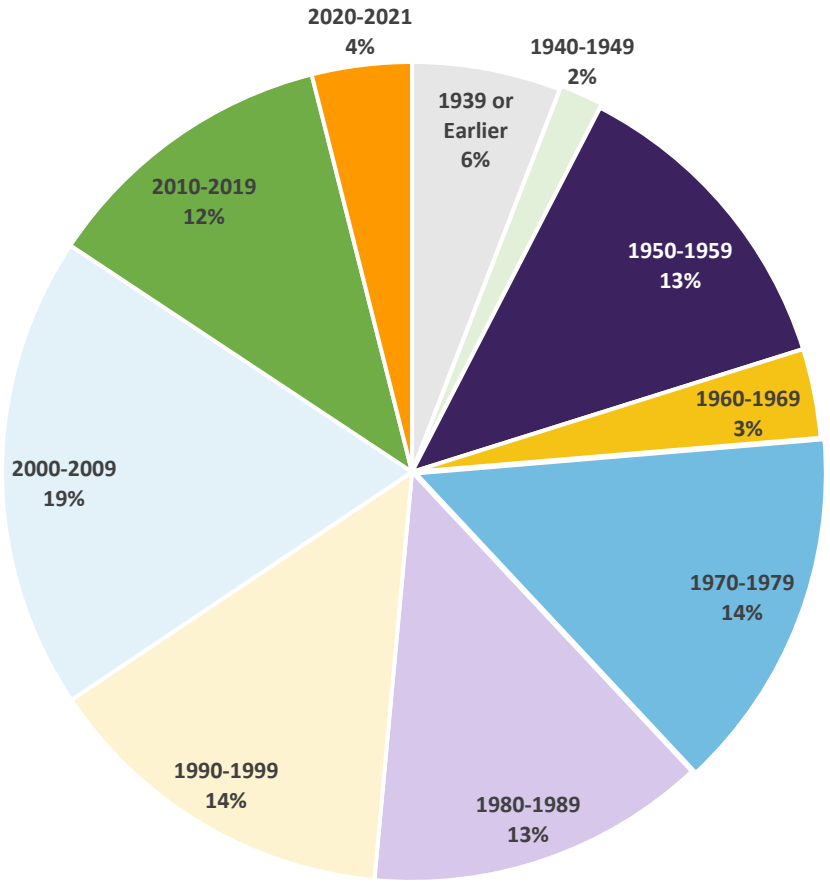
- Only partial record for 2021

Type of housing is monitored as some planning areas (single-family or multi-family) do not necessarily lead to similar yield rates and may change from year to year



© 2022 RSP. All rights reserved

Distribution of Development Activity



Observations:

- Graphic has been created to illustrate the distribution of units by year built
- Year built based on Sedgwick County Data and ESRI
- Over 60% of total inventory was built after 1980
  - The average number of units built per year from 2010 to 2019 (64.1 per year) is lower than from 2000 to 2009 (102.2 per year)
  - The decade with the most units built was 2000 to 2009
  - The average year for all units built was 1984; The median year for all units built is 1990

© 2022 RSP. All rights reserved

Development Activity Over Time

Number of Existing Units		320	414	1,100	1,292	2,076	2,809	3,581	4,602	5,243

Source: Sedgwick County and ESRI

Observations:

- Table has been created to illustrate the number of units by year built
- The average number of units built per year from 2010 to 2019 (64.1 per year) is lower than from 2000 to 2009 (102.2 per year)
- The decade with the most units built was 2000 to 2009
- The average year for all units built was 1984; The median year for all units built is 1990

Definition

- Table has been created to illustrate the type and amount of potential development
- Type is the potential residential units that will be built
- The speed in which any developments are built are influenced by who owns the property, access to infrastructure, and economic indicators

Observations

- 1,059 current potential units and 628 5-year potential units were identified in this study
- Over 1,800 total potential units
- Biggest current developments:
  - Saddlebrook in Park City
  - Prairie Lakes in Valley Center

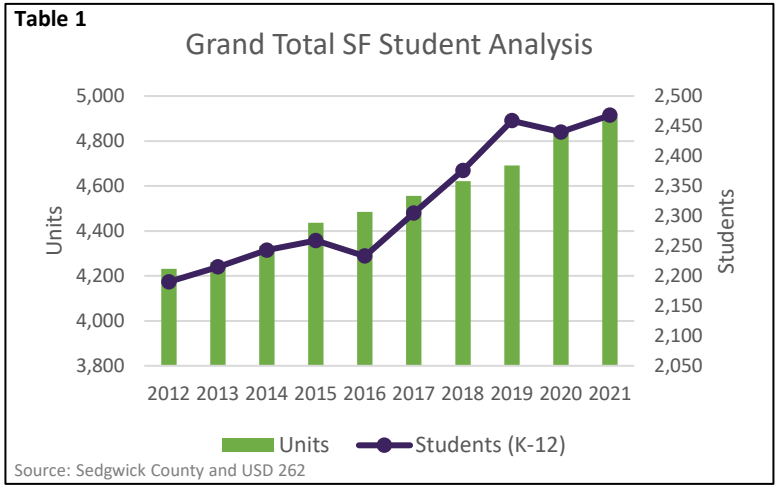
Overall Development and Student Analysis

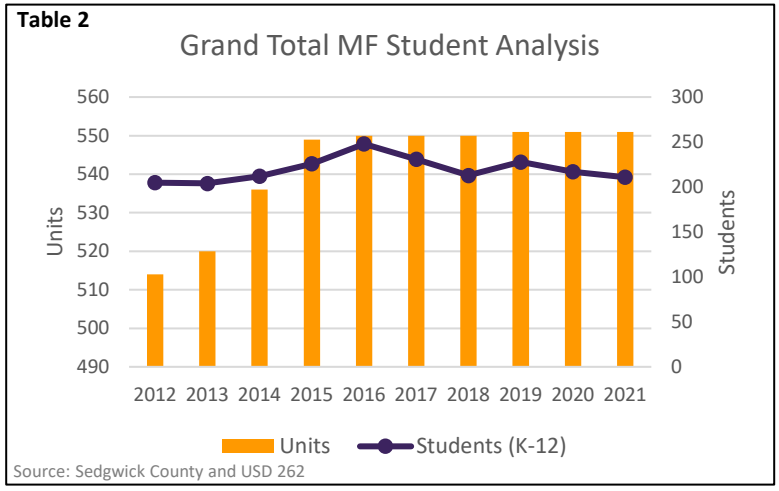
Table 1



Source: Sedgwick County and USD 262

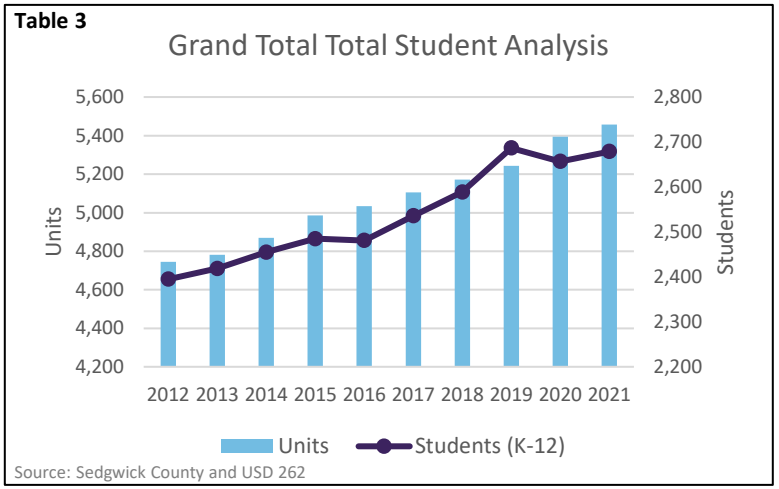
Overall, students increased by 11.9%

Table 2



Source: Sedgwick County and USD 262

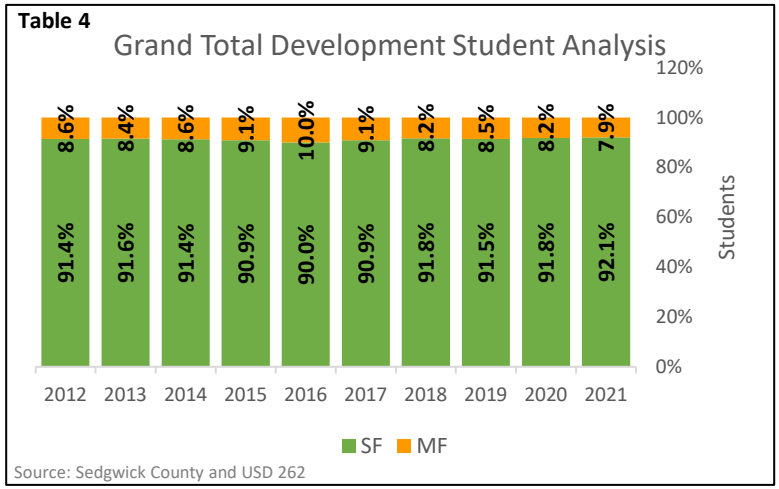
Table 3



Source: Sedgwick County and USD 262

Overall, development increased by 15.0%

Table 4



Source: Sedgwick County and USD 262

- Table 1: The number of Single-Family (SF) units available by year and the number of students attending
- Table 2: The number of Multi-Family (MF) units available by year and the number of students attending
- Table 3: The total number of units and students by year
- Table 4: The percentage of students by development type (Green is SF and Orange is MF)

Main Takeaway:

- Percentage of students living in single family housing has increased by 0.7%
- Multi-family units have increased by 7.2%
- Single family units have increased by 16.0%

© 2022 RSP. All rights reserved

To see this analysis by city level, please see the Appendix.

Development Observations and Conclusions

Overall, the housing inventory is newer with potential for future growth throughout the district

- The median year built for the residential stock in this community is 1990 while the average is 1984
- New developments throughout the district tend to be least affordable while the center of Valley Center includes the most affordable properties

Building activity is not increasing signaling future student decline

- Over 1,00 units that could be built within the next 5-10 years
- Majority of residential growth is single-family development
- Conversation with local planners provided insight for the timing of future projects and expectation of future growth
- Ability to continue developing affordable housing is crucial to future growth
- Infrastructure to the northwest and southwest is crucial to future develop potential

Student population is expected to continue decreasing

- Single-family residential has the highest propensity to have school aged students, yield rates of this development type are much higher than that of multi-family
- Tracking the types of development is important to understand the yield rate of students for every part of the community – there are varying yield rates with all developments

Source: Valley Center Public Schools USD 262 , and RSP SFM & Demographic Models

Observations:

- Enrollment Change – Overall enrollment forecasted to be stable and slightly increase to over 3,150 students by 2026/27
- District increases by nearly 100 students (+3.3%) (Annual Range: +0.1% to +0.9%)
- Elementary School increases by about 80 students (+9.0%) (Annual Range: -1.5% to +4.9%)
- Intermediate School decreases by about 30 students (-5.8%) (Annual Range: -7.5% to +3.0%)
- Middle School increases by nearly 10 students (+1.2%) (Annual Range: -5.0% to +4.3%)
- High School increases by nearly 40 students (+4.0%) (Annual Range: -3.3% to +1.4%)

Projection Notes & Clarifications

- Past Enrollment and 5-Year Projections are shown three different ways:
  1. Out of District (OD) (Based on the student **NOT** Residing in the District)
  2. In District (ID) (Based on where a student Resides in relation to the attendance area)
     (Does Not Include Out of District students)
  3. Attend (Based on what school the student is attending Includes both In-District (ID) and Out-District (OD) students)

- **Capacity**
  - Capacity for each school provided by the district
  - Capacity can be used to benchmark how many students can be served in each building as well as what type of program space is needed for the educational programming

- **Other Items**
  - Enrollment Grade Configuration in Student Forecast Model (PK, K-3, 4-5, 6-8, 9-12)
  - Out of District trends are due to district employee students and other related scenarios. The district does not operate an Open Enrollment or Transfer Policy
  - Students enrolled in The Learning Center or Valley Center Virtual Academy are not included in this analysis
  - Students not receiving services from the district are not shown in any of the information presented in the analysis
  - Projection accuracy is limited by the number of years of student data which matches the State enrollment
  - Open enrollment trends are assumed to follow District policy and will continue like those trends during the projection time frame
  - There are more students residing in the district that are not part of the forecast – the forecast is the likely school district enrollment of students physically attending each school
  - Enrollment changes from day to day – the enrollment forecast is based on the enrollment from the 1st quarter of each school year

Source: RSP & Associates, LLC 2021/22 Student Forecast Model

Items to Consider:

- ES capacity will be greater than 99% capacity by 2026/27
- INTER capacity will be below 90% capacity by 2026/27 and be at its lowest in 2025/26
- MS capacity will be 95% or greater in at least three of the next five years
- HS capacity will be between 97% and 99%
- Future considerations for new buildings or additions should begin in conversation
- Specific areas to monitor for enrollment to increase from the forecast:
  - Development happens at rates different from the last five year
  - Live birth rates increase
  - Out of District students

© 2022 RSP. All rights reserved

Projection Observation and Conclusions

Enrollment Outlook:

- Overall enrollment will increase over the next five years by about an average of 90 students
- **Elementary School enrollment forecasted to increase by over 80 students**
  - *Peak enrollment forecasted for the 2026/27 school year (994 students)*
  - *Elementary class size will increase from an average of 182 to 196 students*
- **Intermediate enrollment forecasted to decrease by about 30 students**
  - *Peak enrollment forecasted for the 2022/23 school year (481 students)*
  - *Intermediate class size will decrease from 93 to 87 students*
- **Middle School enrollment forecasted to increase by about 10 students**
  - *Peak enrollment forecasted for the 2025/26 school year (783 students)*
  - *Middle School class size will increase from an average of 147 to 149 students*
- **High School enrollment forecasted to increase nearly 40 students**
  - *Peak enrollment forecasted for the 2026/27 school year (983 students)*
  - *High School class size will increase from an average of 189 to 196 students*
- Discussion should begin on the expansion of building inventory to relieve schools in the future
- Enrollment in the Early Learning Center and Virtual Academy are not included in this analysis
  - *Valley Center Learning Center enrolls between 35 and 65 students a year*
- Valley Center does not operate an Open Enrollment Policy – students who are identified as Out of District include district employee students or other scenarios
  - *There has been a stable number of students identified in this category (3-year average 183 students)*
- Enrollment should be analyzed annually to ensure the best building and staff decisions are made to enhance the student academic experience

Conclusion & Key Considerations

Projected Enrollment

- District to increase over the next five years: **total over 3,100 students**
- Elementary School to increase over the next five years: **total to about 1,000 students**
- Intermediate School to decrease over the next five years: **total to about 440 students**
- Middle School stable over the next five years: **total about 750 students**
- High School to increase over the next five years: **total about 1,000 students**

Continue monitoring:

1. Development trends; will additional areas have building activity over the next decade
2. Size of incoming Kindergarten classes (smaller) versus size of outgoing senior classes (larger)
3. Enrollment Capping (School Choice) could impact class size or capacity challenge
4. Number of live birth reports year to year (decreasing)
5. Kindergarten roundup (data to determine how close the potential students match up to the projection)

The following items will assist the district advance its educational goals:

- The type of residential development and how affordable it is will determine likely location and number of students (tracking of type of development important to knowing the impact of those trends)
- Annually monitor the impact of future educational programming that will be integrated into each facility to ensure equitable and appropriate space is utilized in the building which will experience enrollment change (Emerging trends and demographic change)

RSP Enrollment forecasting is based on the best-known information at the time of the study.

Each of the items listed in monitoring must be watched to ensure the best decisions are made for the student academic experience

The goal of this study is to help the board, administration, and public understand how to make the best decision for the students at the classroom level.

Infographics

Population

Percent Change of Annual Rate

2000 to 2010: 2.22%
2010 to 2021: 0.75%
2021 to 2026: 0.74%

Housing

Percent Change of Annual Rate of Housing Inventory

2000 to 2010: 2.61%
2010 to 2021: 0.77%
2021 to 2026: 0.73%

Income

Percent Change of Income per Capita

2021: $36,600
2026: $40,961
2021 to 2026: 2.28%

Workforce

Unemployment Rate

July 2021: 2.6%

Notes:

- The district is seeing an increasing population for the past 10 years. 2021 to 2026 is expected to increase at a smaller rate
- The district is seeing an increase in housing. The greatest increase was from 2000 to 2010
- Income has been increasing in the district and is projected to continue increasing at 2.28% level
- The unemployment rate is lower than the State of Kansas -- 4.1% as of July 2021 (US Census)

Notes:

- Demographic attribute information for Valley Center Public School District is similar to City of Valley Center
- Vacancy Rate is lowest in the Valley Center Public School District except for City of Valley Center when compared to the other geographies
- The Unemployment Rate is lower than the State of Kansas (estimates from July 2021 from the US Census)
- Median Age is 4% higher in Valley Center Public School District when compared to the State of Kansas
- Median Household Income is highest in Valley Center Public School District when compared to the other geographies

Planning Areas

District Boundary:
- **Purple Line**

Planning Areas:
- **Green Line**

Statistically analyzing data with this number of geographic based polygons will provide a deeper context to how change is happening resulting in a reliable tool to make credible planning decisions

Each planning area had a different outlook based on indicators such as value of housing, square footage of housing unit, when the housing product was constructed, as well as access to amenities such as shopping, parks, trails, and roads

Planning Areas are created from: Land Use, Residential Density, Natural Features, Manmade Features, Attendance Areas
